

Northwood Police Department

Investigative Statement

Case No.
15-1107

Date filed:
October 18, 2015

STATEMENT

Following the theft of the Ainsworth Meteorite from the Northwood Observatory during the Stargazer Event on October 17, 2015, investigators have reviewed several online postings from a social media account under the name "StarGazer424."

The posts, dated over the past several months, express strong opposition to the observatory's display of the meteorite, arguing that such objects are "not museum trophies" and "let it be returned to their rightful place beneath the open sky." The author repeatedly refers to meteorites as "living travelers" and describes them with language suggesting spiritual or cosmic significance.

Summary of Beliefs:

Based on the collected posts, the user appears to believe that meteorites possess special or mystical powers and that keeping them in glass cases is an act of disrespect or even desecration. They promote the idea of "liberating" celestial objects from human ownership and returning them to nature.

Capability Assessment:

While the posts are strongly opinionated, there is no direct threat or claim of intent to commit a crime. However, the timing, tone, and frequency of the posts leading up to the event raise the possibility that the author could be directly or indirectly involved in the theft.

Given the technical knowledge needed to bypass the observatory's security system, it is likely that the suspect either needs personal familiarity with the building or would need to communicate with someone who does. Investigators believe the account holder may be a local resident or someone who has spent significant time in or around Northwood.

Preliminary Conclusion:

While no definitive link has been established, detectives consider "StarGazer424" a person of interest in the ongoing investigation. The ideological motivation aligns with the nature of the crime, and the possibility of coordination with an insider cannot be ruled out.

Status: Active investigation. Monitoring of online activity continues.

@StarGazer424

Ever think about how meteorites are the *oldest living travelers* in existence? Billions of years adrift, and the first thing we do is shove them in display cases. They are not museum trophies. Humanity still doesn't get it.

@StarGazer424

Some say meteorites hum at a frequency too low for human ears. Maybe that's why we feel their pull. Energy like that shouldn't be buried under bureaucracy.

@StarGazer424

Just saw the press release for the "*Stargazer Weekend*." Funny how they never mention what they *took* from the Earth to make it happen. The Amesworth Meteorite deserves better than souvenir treatment.

@StarGazer424

Meteorites are not artifacts — they're *ambassadors*. Each one holds the memory of stars older than our sun. Keepers, not captors. #CosmicRespect

@StarGazer424

 "*You can't cage the sky.*" The Amesworth Meteorite belongs to the stars — not trapped under glass for people to gawk at. Every rock from the heavens carries a story, and it deserves freedom.

@StarGazer424

Let the Amesworth Meteorite finish its journey. Let the living traveler finally rest. Let it be returned to their rightful place beneath the open sky #FreeTheFallenStar

@StarGazer424

They call it “*science*” to keep a sacred thing in a box? The Amesworth Meteorite didn’t fall to Earth to be labeled and locked up. It fell to *remind us* that we’re part of something infinite. #FreeTheFallenStar

@StarGazer424

Did you know some ancient cultures believed meteorites held messages from the gods? The Amesworth isn’t just a rock — it’s a relic of creation itself. It is nature. Treat it with reverence, not fluorescent lighting.

@StarGazer424

The Northwood Observatory keeps talking about “*research value*.” What about spiritual value? What about respect? Maybe the meteorite didn’t choose to fall here by accident. Maybe it’s testing us.

@StarGazer424

This Saturday, while they celebrate with snacks and speeches, remember: the meteorite doesn’t belong to them — it belongs to the cosmos - it belongs to the Earth. It’s time someone set it free. 🌠

@StarGazer424

Energy like that shouldn’t be contained. Iron-nickel cores pulse with cosmic memory — scientists know this. But they keep it secret. #ReturnItToTheStars
