

Scholarship Established in Memory of Dr. Eleanor Vance

By: Lydia Harper

NORTHWOOD — Northwoods Institute has announced the creation of a new scholarship honoring the late Dr. Eleanor Vance, a beloved scientist, mentor, and colleague whose contributions to biochemistry left a lasting mark on both research and education.

The scholarship, designed to support graduate students in biochemistry, is being made possible through a collaboration between three people who knew Eleanor best: Dr. Marcus Adler, fellow researcher; Catherine Rowe, former collaborator; and Ann Calloway, Eleanor's longtime partner.

Catherine Rowe and Marcus Adler worked closely with Northwoods Institute to finalize a new research partnership agreement that addresses many of Eleanor's priorities and concerns, ensuring her vision for responsible, impactful science will live on. A portion of the revenue generated from this partnership will be dedicated to funding the scholarship annually.

Meanwhile, Ann Calloway has taken on a pivotal role in outreach, helping with marketing and communications so that students across the region know about the opportunity. "Eleanor cared deeply about mentoring the next generation," Calloway said. "She believed science should be accessible, and this scholarship is one way we can honor her commitment."

Dr. Adler emphasized that the scholarship is not only about financial support but also about carrying forward Eleanor's values. "Eleanor demanded rigor, creativity, and compassion in her work. We hope this scholarship inspires students to pursue science with the same dedication she embodied."

Applications for the scholarship will open later this year, with details available on the Northwoods Institute website.

Through this initiative, Eleanor's colleagues and loved ones hope to ensure that her passion for biochemistry and her legacy of mentorship will continue to shape future scientists for years to come.

Death of Local Scientist Reclassified as Homicide

By: Lydia Harper

NORTHWOOD — The Northwood Police Department announced yesterday that the death of Dr. Eleanor Vance, a respected researcher at Northwood Laboratory, is now being investigated as a homicide.

Dr. Vance was found dead in her laboratory last month, and the case was initially ruled a tragic accident. However, following a fresh review of the case file by an anonymous outside reviewer, investigators determined that the circumstances surrounding her death warrant a renewed inquiry.

The department has not released further details at this time but emphasized that the case is “very much active.”

Dr. Vance’s partner, Ann Calloway, shared a brief statement with the Gazette:

“Eleanor was the kind of person who gave everything she had to her work, her students, and the people she loved. To think someone may have taken her from us is devastating. But I’m grateful this case is finally being looked at for what it is. She deserves justice, and I believe the truth will come out.”

Colleagues at Northwood Laboratory described Dr. Vance as brilliant, meticulous, and deeply principled. Her research was said to be at the cutting edge of biotechnology, and her sudden death shocked both the scientific community and the wider town.

The Northwood Police Department has asked that anyone with information related to the case contact their tip line.

High School Play Debuts

Northwood High will debut its latest play, *The Curious Case of the Clockmaker’s Daughter*, on Friday evening. Students have been building the set out of scrap wood collected from community donations, and Principal Harrow says the production will be “both quirky and heartfelt.”

Garden Club Raffle

The Northwoods Garden Club is holding its annual raffle this week. Prizes include a basket of tulip bulbs, a set of gardening tools, and the ever-popular “mystery plant”. Last year’s plant grown by Renee Carter turned out to be a pumpkin vine that took over half of her yard. Tickets are \$2 each, with proceeds supporting the flower beds along Main Street.

Renowned Biochemist Found Dead in Northwood Lab

By: Lydia Harper

NORTHWOOD — The scientific community is in shock following the death of Dr. Eleanor Vance, 52, a leading biochemist known for her groundbreaking work on synthetic enzymes. Dr. Vance was discovered dead late Wednesday night in Lab 304 at the Northwood Research Institute.

According to the Northwood Police Department, Dr. Vance’s body was found near her workbench after an alarm was triggered around 11:40 p.m. by institute security. The laboratory appeared largely undisturbed, though several pieces of glassware were broken, and a vial containing a chemical compound lay open nearby.

Dr. Vance, a native of Duluth, Minnesota, earned her Ph.D. in Biochemistry from the University of Minnesota and had been a faculty member and lead researcher at the Northwood Research Institute for over 15 years. She was widely respected for her meticulous research methods and her dedication to mentoring young scientists.

“She was brilliant, kind, and always had time for her students,” said Dr. Lila Moreno, a former colleague. “Eleanor believed in doing science the right way, and she inspired everyone around her.”

Friends and family remembered her as equally devoted outside the lab. “Eleanor had a huge heart,” said her sister, Dr. Margaret Vance. “She cared deeply about her work, but she cared even more about people. I’m devastated.”

Dr. Vance was also known for her ethical stances on scientific research. She had recently rejected a corporate partnership over concerns about potential misuse of her enzyme technology. “Eleanor’s work was always about helping people, not profit,” said a former student, Renee Carter, who had also worked as her lab assistant.

Library Extends Evening Hours
The Northwood Public Library has responded to community requests by extending its evening hours. Starting next week, the library will remain open until 9 p.m. on weekdays, offering study space, computer access, and new spring programming for families.

Bridges to Reopen Soon
City officials announced that all pedestrian bridges across the river are expected to reopen on March 15, following three days of repair work. The bridges have been closed since March 12 for safety upgrades, forcing detours for commuters and local employees. Staff and guests at the Northwood Laboratory, in particular, have faced an extra 30-minute walk from parking lot B across the river to the lab during the closures.

Farmers Market Returns
The annual Spring Farmers Market will kick off this Saturday in Riverside Park. Local growers, bakers, and artisans will set up booths from 8 a.m. to 1 p.m. Organizers say the market will feature early-season produce, handmade crafts, and live acoustic music.

Authorities have confirmed that the lab was locked from the inside and that only authorized personnel had access. “We are thoroughly investigating all aspects of this case,” said Police Chief Raymond Harris. “At this stage, we are speaking to staff and analyzing laboratory materials. Unfortunately, this appears to be a tragic accident.”

A memorial service is expected to be held next week in Duluth, where Dr. Vance grew up. Colleagues and students from across the country are expected to attend to honor her contributions to science and her enduring legacy as a mentor.

NORTHWOODS DINER
“Where neighbors meet for a good meal.”

 Main Street, Northwoods
 Open daily: 6 a.m.- 9 p.m.

Come hungry. Leave happy.
